

THE NEWEST INNOVATION IN MUSCULOSKELETAL CARE IS HERE: THE CENTER FOR ORTHOPEDICS & MOVEMENT.

Exeter Hospital and Core Physicians have developed a new musculoskeletal center that brings multiple practices together to enable collaboration, convenience and patient-centered care. Our innovative new destination center brings team-based care to one convenient location. The Center is now open for:

- Orthopedics
- Physiatry
- Neurosurgery
- Sports Medicine
- Rehabilitation
- Aquatic Rehabilitation
- Rheumatology
- Massage Therapy
- Acupuncture.
- Podiatry
- Neurology

| <p><i>One location, one treatment plan – personalized for each individual patient.</i></p> | <p><i>Team-based care that focuses on the patient – with the right provider in the right place at the right time.</i></p> | <p><i>A center-wide commitment to improving wellness and function, and building longer-term independence.</i></p> |

THE CENTER FOR ORTHOPEDICS & MOVEMENT

 EXETER HOSPITAL
  CORE PHYSICIANS

OUR CENTER'S SERVICES KEEP YOU MOVING.

Core Orthopedics' physicians and surgeons provide care for injuries and disorders of the bones, joints and muscles. The team includes specialists in the areas of foot & ankle, shoulder, hand & wrist, and joint replacement.

Core Physiatry & Spine Care physicians provide comprehensive non-surgical treatment of back and neck pain or injuries, and have additional training in alternative medicine and sports medicine. If conservative treatment is no longer an option, our physiatrists partner with Coastal New Hampshire Neurosurgeons, who will consult with patients in our new Center.

Core Podiatry treats patients with a wide variety of foot and ankle injuries and conditions, from common problems such as bunions to diabetic foot problems and sports injuries. When non-invasive treatment is not enough, our team includes foot and ankle specialized surgeons.

The Sports Medicine Team includes providers from many of the Center's practices. With diverse backgrounds and extensive sports experience, they provide comprehensive care to maximize function and return athletes to play.

Core Neurology provides expert diagnostic and non-invasive treatment for a wide variety of conditions that affect the nervous system and brain.

Core Rheumatology provides therapeutic treatments to patients with arthritis and other rheumatic ailments as well as many inflammatory diseases. The physicians work closely with their patients to minimize long-term joint and tissue damage and improve overall function and quality of life.

Exeter Hospital's physical therapists, occupational therapists and speech pathologists provide individualized rehabilitation services to people of all ages. Specialty services include spine and hand therapy, pelvic floor physical therapy, neurological rehabilitation and aquatic rehabilitation in our lap pool and warm water pool.

Alternative medicine services, such as acupuncture and massage therapy, are also located at the Center, which compliment other health care services by helping reduce pain and enhance wellness.
